The USF Health Center for Advanced Medical Learning and Simulation (CAMLS) is excited to announce the Interprofessional Simulation Fellowship at USF Health CAMLS. The fellowship is designed to create the next generation of leaders in health care education, who have the experience necessary to lead multidisciplinary simulation centers, drive innovation in experiential learning, and research best practices in simulation-based education. Positioned in the heart of downtown Tampa, USF Health CAMLS is one of the world's largest freestanding simulation centers and is uniquely positioned to provide the fellow broad exposure to a variety of learners, simulation modalities, large-scale organizational operations, and educational interventions to advance interprofessional education and improve patient safety. Our goal is to inspire and create the next generation of health care educators, leaders, and researchers in simulation.

Applications are being accepted for a single position to start in the summer of 2020. The fellowship is a 1-year, non-ACGME accredited fellowship, offered to board-eligible and board-certified emergency medicine physicians. As part of the division of emergency medicine, the simulation fellow will be a member of the clinical faculty within the USF Health Morsani College of Medicine based at Tampa General Hospital, giving the fellow the opportunity to practice in an academic setting, teaching USF emergency medicine residents and medical students.

Interested candidates should send a letter of interest and CV to:

Ryan McKenna, DO, FACEP
ryanmckenna@health.usf.edu

Fellowship Director, Interprofessional Simulation Fellowship at USF Health CAMLS
Director of Simulation, Emergency Medicine
Affiliate Assistant Professor, Department of Internal Medicine
USF Health Morsani College of Medicine
